

Wave 29
June 2024

## Methodology

- These are findings of an Ipsos poll conducted on behalf of MNP.
- For this survey, a sample of 2,001 Canadians from the Ipsos i-Say panel was interviewed from Jun 6 - Jun 11, 2024.
- Quotas and weighting were employed to ensure that the sample's composition reflects the overall population according to the latest Canadian census information.
- The precision of online polls is measured using a credibility interval. In this case, the results are accurate to within $\mathbf{\pm 2} 5$ percentage points, 19 times out of 20 , of what the results would have been had all Canadian adults been polled.
- Credibility intervals are wider among subsets of the population.
- Due to rounding, not all percentages will add up to $100 \%$.

## Executive Summary

The MNP Consumer Debt Index has declined once again to 85 points, demonstrating that the road to recovery is not a straight line! Canadians are feeling pessimistic about their personal finances, despite a fleeting surge of optimism last quarter. The recent announcement from the Bank of Canada about dropping key interest rates may have led some to anticipate a more significant decline or immediate impact. Consequently, they are now feeling more disheartened and are eagerly awaiting the next announcement, hoping to see a consistent decline that will have a more meaningful impact on their finances.

## Insolvency Rates Steady

$46 \%$ of respondents are $\$ 200$ or less away from financial insolvency, consistent with last quarter. The proportion stating they are already insolvent has slightly decreased to $29 \%(-2)$, while more respondents claim to have a small buffer, but are still within \$1 to $\$ 200$ of insolvency $(17 \%,+3)$ each month.

Women continue to be more at risk of insolvency than men. Notably, there has been a significant increase among Albertans at risk of insolvency. Among Canadians who have stated they are overwhelmed with debt and believe lower interest rates won't help, six out of ten are insolvent or at risk of insolvency (62\%)

## Month-End Finances Down

After all bills and essential expenses are settled, Canadians, on average, are left with $\$ 782$ at the end of the month, a decrease of $\$ 60$. Most Canadians across various demographics have experienced a decline in their month-end finances, likely due to increased cost of living on food, shelter and transportation.

Older Canadians (55+) and those with a household income of less than 40K have approximately $\$ 100$ more leftover this quarter. However, Albertans have seen a significant decrease in their month-end finances this quarter (-\$599), following a substantial increase in March 2024.

## Negative Sentiment on Current Debt but Optimistic for the Future

Debt perceptions have sharply fallen after a rise in March 2024. When asked to compare to a year ago, $23 \%$ of Canadians ( -4 ) feel their debt situation is much better, while $16 \%(+3)$ believe it's much worse. Reflecting on five years ago, $29 \%(-1)$ say their debt situation has improved, but $26 \%(+6)$ report it has worsened.

As interest rates drop, Canadians' expectations for future debt stabilize. Considering five years ahead, $39 \%$ (+2) feel more optimistic about their debt, with $12 \%$ expecting it to worsen, unchanged from last quarter.

## Executive Summary

Further Interest Rate Decline Needed
Two-thirds of Canadians state they desperately need a reduction in interest rates $(66 \%)$, and high interest rates have negatively impacted their household finances (65\%). Almost half express concern about their ability to repay their debts, even if interest rates were to decline (47\%).

Concurrently, just over half believe that interest rates will need to go down a lot before their financial situation significantly improves (57\%). They also express concern that interest rates may not decline quickly enough to provide the financial relief they require (56\%). Notably, 34\% feel they are so heavily in debt that even lower interest rates would offer little help.

## Lower Interest Rates Makes Room for More Savings and Lower Debł

If interest rates drop in the next three months, many Canadians intend to save more (45\%) or accelerate their debt repayment (36\%). However, nearly three in ten believe that declining interest rates won't affect them in any way (29\%).

Canadians aged 18-34 are significantly more inclined to save more or spend more on non-essential items if interest rates decrease, while those aged 3454 are more likely to focus on paying off debt more quickly. Those aged 55 and above, British Columbians, and Ontarians are most likely to report that changes in interest rates won't impact them.

## Debt-Index Tracking

The MNP Consumer Debt Index has declined once again to 85 points, showing a pattern of two-steps forward, one step back. Despite the Bank of Canada announcement dropping key interest rates to $4.75 \%$, Canadians are still pessimistic about their current personal finances and are awaiting the next announcement for a significant change as many Canadians are expecting to renew their mortgage this year.

[^0]
## EVALUATING PFRSONAL FINANCES

## Finances at Month-End

Consistent with March 2024, 46\% are $\mathbf{\$ 2 0 0}$ or less away each month from financial insolvency. However, fewer state they are already insolvent (29\%, -2), and more are \$1 to \$200 away from insolvency (17\%, +3).

 before you wouldn't be able to pay all your bills and debt payments each month (which is called financial insolvency)?
Base: All Respondents (unweighted) n=2001

## Average Finances Left at Month-End

After all bills and essential expenses are settled, on average, Canadians are left with $\$ 782$ at month-end, down $\$ 60$. Most Canadians across various demographics have seen a decline in month-end finances, potentially due to an increase of spending as interest rates begin to decline, rising housing costs or persistently-stubborn inflation. However, older Canadians (55+) and those with less than $\$ 40 \mathrm{~K}$ household income have about $\$ 100$ more leftover this quarter, likely reflecting efforts to scrimp and save.

 before you wouldn't be able to pay all your bills and debt payments each month (which is called financial insolvency)?

## Finances at Month-End - \% \$200 or less from insolvency

Canadians who report being $\$ 200$ or less away from insolvency continue to be women, however, the gender gap has widened slightly. Three in five Canadians with less than \$40K income are still at risk of insolvency. Interestingly, Albertans have seen a significant increase in those at risk of insolvency. Six in 10 Canadians who have stated they are overwhelmed with debt and for whom lower interest rates won't help are insolvent or at risk of insolvency (62\%).

Gen Z

vs. Gen X $(52 \%,+3)$, Millennial (48\%, +4 ) and Boomer (35\%, -5 ).

## Personal Debt Rating

Canadians' net personal debt rating has declined slightly to 19 points, a three-point decrease from last quarter. The shift is a result of fewer who felt their personal debt rating is 'excellent' (38\%, -3).

Q2. On a scale of 1 to 10 , where 1 is 'terrible' and 10 is 'excellent', how would you rate your personal debt situation? Base: All Respondents (unweighted) $n=2,001$

14 - © Ipsos

## Excellent Personal Debt Self-Assessment

Who is more likely to rate their personal debt situation as 'good'? Assessments are up for British Columbians and Atlantic Canadians, and down significantly for Albertans, Quebecers, and those with $\$ 100 \mathrm{~K}+$ income.

Women are more likely to say that they are either already insolvent or $\$ 200$ or less away from insolvency,

## Current Debt Situation

Current debt perceptions have declined significantly after a generous bump in March 2024.

When asked to look back to one year ago, fewer Canadians perceive their current debt situation to be much better $(23 \%,-4)$ and more $16 \%(+3)$ have rated it much worse.

## Net Scores (Better minus Worse)

## Expected Debt Situation

Canadians' perceptions of their expected debt situation in the future stabilize as interest rates begin to drop.

Looking ahead to one year from now, 3 in 10 Canadians expect their debt situation to improve $(29 \%,-1)$, although a growing proportion believes it will worsen $(16 \%,+2)$.

Looking five years into the future, more Canadians are feeling better about their expected debt ( $39 \%$, +2 ) and a similar proportion to last quarter believes that their debt situation will worsen (12\%, unchanged).

## Net Scores (Better minus Worse)

## Expected Debt Situation: Worse

## Current Ability to Absorb Interest Rate Increase

Canadians' perception of their ability to absorb additional interest rate increases has declined significantly from last quarter matching levels compared to last year.

Net score when phrased as a one percentage point increase has decreased by 9 points to $-4 \%$.

Net ability to absorb an extra \$130 in interest payments declined significantly, down 13 percentage points to -16\%.

While interest rates are showing signs of declining over the next couple years, Canadian will likely not react well to rates that are sluggish to drop or - worse still - go back up.

## Confidence in Ability to Cope

Canadians remain pessimistic about their ability to cope with life's unexpected expenses as net confidence is negative across the board. However, more a feeling confident about their ability to cope with a change in their relationship status (+2) and fewer are less confident (-4). Significantly more are not confident about paying for their own or someone else's education (+14)

Q4. On a scale of 1 to 10 , where 1 is 'not at all confident' and 10 is 'extremely confident', how confident are you in your ability to cope with the following life changes without increasing your debt? Base: All Respondents (unweighted) $n=2,001$

## Confidence in Ability to Cope - Net Scores

Net confidence scores on coping with life changes have remained in the negative across the board, most notably paying for your own or someone else's education (down 15 percentage points), the loss of employment (down 8 percentage points), and the death of an immediate family member (down 7 percentage points).

Loss of employment/change in wage or seasonal work

## Evaluating Personal Finances

Consistent with last quarter, three in five Canadians agree they are concerned about the impact of rising interest rates on their financial situation (59\%, unchanged). Half of Canadians are confident they won't have any debt in retirement, but at least four in 10 regret the amount of debt they have taken on (45\%) or is concerned about their current level of debt (42\%).

## Evaluating Personal Finances - Agree (6-10)

Canadians' evaluation on their personal finances is consistent with the previous quarter. Slightly more are concerned that they or someone in their household could lose their jobs $(37 \%,+2)$.

## NTHREST RATIES

## Attitudes Towards Interest Rates

Most Canadians agree they have a solid understanding of how interest rate increases impact their financial situation ( $80 \%,+4$ ) and if interest rates go up much more, they will be in financial trouble $(57 \%,+3)$. Two-thirds of Canadians state they desperately need interest rates to go down (66\%) and high interest rates have had a negative impact on their household's finances (65\%). Just under half agree that even if interest rates decline, they are still concerned with their ability to repay their debts (47\%).

## Attitudes Towards Interest Rates

Women and Canadians aged 18-54 are most likely to agree they desperately need interest rates to go down and that high interest rates have had a negative impact on their household's finances. Canadians aged 18-34 are significantly less likely to have a solid understanding of how interest rate increases impact their financial situation compared to other age groups despite $71 \%$ saying they are aware. Overall, Canadians aged $55+$ are least concerned with the effects of interest rates on their personal finances compared to younger Canadians.

## Impact of Lowering Interest on Personal Finance

## Behaviours if Interest Rates Decline

If interest rates decline in the next 3 months, most Canadians plan to save more money ( $45 \%$ ) or pay off their debt faster ( $36 \%$ ). Fewer say they will spend more on wants instead of needs ( $10 \%$ ), make a major purchase ( $9 \%$ ), buy a home ( $6 \%$ ), add to their debt (5\%), or apply for a new form of credit (5\%). Three in 10 say that declining interest rates won't impact them in any of these ways (29\%).

Qwave29.1. Which of the following are you likely to do if interest rates decline in the next 3 months? Base: All Respondents (unweighted) n=2,001

37 - © Ipsos

## Behaviours if Interest Rates Decline - Demographics

Canadians aged 18-34 are significantly more likely to say they will save more money or spend more money on wants instead of needs if interest rates decline, while those aged $34-54$ are more likely to say they will pay off their debt faster. Those aged 55+, British Columbians, and Ontarians are significantly most likely to say that declining interest rates won't impact them.

## Impact of Interest Rate Declines on Personal Finance

Three in four Canadians say lower interest rates will have a positive impact on their household finances (75\%) and will give them more financial breathing room (73\%). On the other hand, just over half say interest rates will have to go down a lot before their financial situation significantly improves (57\%) and they are concerned interest rates won't decline fast enough to offer the financial relief they need (56\%). Notably, 34\% are too deep in their debt that lower interest rates won't help much.

Qwave29.1. To what extent do you agree or disagree with the following?
Base: All Respondents (unweighted) $n=2,001$
39 - © Ipsos

## Impact of Interest Rate Declines on Personal Finance - Demographics

Older Canadians (55+) are significantly less likely to agree across all statements than their younger counterparts.
Saskatchewanians and Albertans and those with $\$ 40 \mathrm{~K}$ or less household income are significantly more likely to say they need interest rate to go down a lot before their financial situation significantly improves and are concerned interest rates won't decline fast enough to offer financial relief. Quebecers and Canadians with $\$ 40 \mathrm{~K}$ or less are significantly most likely to say they have accumulated so much debt that lower interest rates won't help much.

## Game Changers

In our world of rapid change, the need for reliable information
to make confident decisions has never been greater.
At Ipsos we believe our clients need more than a data supplier, they need a partner who can produce accurate and relevant information and turn it into actionable truth.

This is why our passionately curious experts not only provide the most precise measurement, but shape it to provide True Understanding of Society, Markets and People.

To do this we use the best of science, technology and know-how and apply the principles of security, simplicity, speed and substance to everything we do.

So that our clients can act faster, smarter and bolder. Ultimately, success comes down to a simple truth: You act better when you are sure.

[^0]:    Note on interpretation: A high debt index score means that Canadians feel positive towards their personal finances, as well as confident in their ability to cope with unexpected financial situations. A low index score describes the opposite - negative feelings and low confidence.
